AMENDMENTS TO THE CLAIMS/CLAIM LISTING

Kindly amend the claims as follows:

1. (Original) A method for image separation of an image, the image comprising pixels, the method comprising the steps of:

identifying kernels reflected by at least one of the operators selected from the group consisting of: P(x-w,y) - P(x,y) > t AND P(x+w,y) - P(x,y) > t; and P(x,y-w) - P(x,y) > t ; and P(x,y+w) - P(x,y) > t ; and P(x+d,y+d) - P(x,y) > t ; and P(x-d,y+d) - P(x,y) > t ; and P(x+d,y+d) - P(x,y) > t ;

associating said kernels with a first layer, and

classifying as a second layer, said pixels which are not associated with said first layer.

- 2. (Original) The method of claim 1 wherein said first layer is a text or graphics.
- 3. (Original) The method of claim 1, wherein said second layer is a background.
- 4. (Original) The method of claim 1 whercin said first layer is darker than said second layer.
- 5. (Original) The method of claim 1 wherein said first layer is lighter than said second layer.
- 6. (Original) The method of claim 1, wherein identifying kernels comprises performing a binarization technique.
- 7. (Original) The method of claim 1, wherein identifying kernels comprises performing text binarization.
- 8. (Original) The method of claim 1, wherein identifying kernels comprises examining grey characteristics of pixels in an expansion of said kernels, wherein said expansion is less than or equal to 3 times w, wherein w is a typical stroke width of said image.

- 9. (Original) The method of claim 1, and further comprising the step of storing said first layer.
- 10. (Original) The method of claim 1 and further comprising the step of compressing said first layer with a high resolution compression technique.
- 11. (Original) The method of claim 1 and further comprising the step of compressing said second layer with a high lossy compression method.
 - 12. 16. (Previously cancelled)
 - 17. 19. (Cancelled)
 - 20. (Currently amended) A system for separating an image comprising:

a scanner for creating a digital image;

means for identifying kernels reflected by at least one of the operators selected from the group consisting of: P(x-w,y) - P(x,y) > t AND P(x+w,y) - P(x,y) > t; and P(x,y-w) - P(x,y) > t AND P(x,y+w) - P(x,y) > t; and P(x+d,y+d) - P(x,y) > t AND P(x-d,y-d) - P(x,y) > t; and P(x-d,y+d) - P(x,y) > t; and associating said kernels with a first layer[[.]];

a processor for separating said digital image into said first and second layer, and for compressing said first layer with a first compression technique and for compressing said second layer with a second compression technique; and

a memory for storing said compressed first and second layers.

- 21. (Cancelled).
- 22. (Currently amended) The system of claim 21 20 wherein said means for identifying is a text binarization tool.
- 23. (Original) The system of claim 20, wherein said processor comprises a compression means for compressing said first layer with a high resolution compression technique.

- 24. (Original) The system of claim 20, wherein said processor comprises a compression means for compressing said second layer with a high lossy compression method.
- 25. (Original) The system of claim 20, wherein said processor comprises restoration means for creating a restored digital image from said compressed first and second layer.
- 26. (Original) The system of claim 20, wherein said compressed first layer comprises, a binary mask of the foreground layer, compressed grey level foreground layer data, and quantization grey levels.
- 27. (Original) The system of claim 26, wherein said compressed grey level foreground layer data is stored a two bit buffer.
- 28. (Original) The system of claim 26, wherein said compressed grey level foreground layer data is stored a one bit buffer.
- 29. (Original) The system of claim 26, wherein said quantization grey levels comprises four levels.
- 30. (Original) The system of claim 26, wherein said quantization grey levels comprises two levels.
 - 31. (Cancelled)
